- This Software is going to bring a new Revolution over the World in Future.
- The Traders and The Customers will see Only Profit.

# Technology Used For DyB

## HTML

HTML (HyperText Markup Language) is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables.

## CSS

CSS (Cascading Style Sheets) is used to style and layout web pages — for example, to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

## PHP

PHP is an open-source, server-side programming language that can be used to create websites, applications, customer relationship management systems and more. It is a widely-used general-purpose language that can be embedded into HTML.

## JAVA SCRIPT

JavaScript (JS) is a cross-platform, object-oriented programming language used by developers to make web pages interactive. It allows developers to create dynamically updating content, use animations, pop-up menus, clickable buttons, control multimedia, etc.

The screenshot shows a Firefox browser window with a dark theme. The title bar displays the browser's name and the date and time. Below the title bar is the activity switcher, which lists several open tabs. The main content area shows a web page with a header 'Develop Your Business'. The page contains four input fields: 'Product name', 'Price', 'Address', and 'Description'. Below the 'Address' field is a file input field with the placeholder 'Browse... No file selected.' and a 'submit' button. The left side of the screen features a vertical sidebar with icons for various applications, including a file manager, a terminal, and system settings. The overall interface is clean and modern.
